DIGEST

Growing Share of World Markets Boosts Export Value in 1988 (see p. 2). U.S. agricultural exports rose to \$32 billion during the first 11 months of fiscal year (FY) 1988 (October 1987-August 1988), growing \$6.5 billion from the same period of FY 1987. This 1988 level marked the highest export value since that for the first 11 months of FY 1984. U.S. export value in October-August of FY 1988 also marked a return to the levels and share of world trade attained before passage of the 1985 Food Security Act. U.S. export prices, volume, and world market shares were higher for most commodities in the first 11 months of FY 1988 compared with year-earlier levels.

October-August Imports Up 2 Percent to \$19.4 Billion (see p. 7). U.S. agricultural imports in the first 11 months of FY 1988 rose 2 percent to \$19.4 billion, \$300 million above the level of the same period in FY 1987. U.S. agricultural imports were at a record-high pace through May but began to slip during the summer. This decline was reflected in the August import forecast. The import forecast for FY 1988 was lowered from \$21 billion to \$20.5 billion based on the slowdown during the third quarter, particularly in imports of coffee, cocoa products, pork, and horticultural products.

U.S. Trade Benefits Economy (see p. 14). U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in calendar year 1987 stimulated another \$1.65 (or an additional \$47.2 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 903,000 full-time civilian jobs, including 522,000 jobs in the nonfarm sector.

Appendix Tables (see p. A-1). Tables cover quantities and values for U.S. agricultural exports and imports by commodity and country for October-August 1986/87 and 1987/88 and commodity prices for October-August 1987/88.

Fant. Trina J. Duffin provided word processing and table formatting support. Editorial support was provided by Teri L. Davis, Research Information Branch, Information Division, Economics Management Staff. Data processing support was provided by Sharlan Starr and William Meiller, International Economics System Branch, Data Services Center.

GROWING SHARE OF WORLD MARKETS BOOSTS EXPORT VALUE IN 1988

U.S. agricultural exports rose to \$32 billion during the first 11 months of fiscal year (FY) 1988 (October 1987-August 1988), growing \$6.5 billion from the same period of FY 1987. This 1988 level marked the highest export value since that for the first 11 months of FY 1984. U.S. export value in October-August of FY 1988 also marked a return to the levels and share of world trade attained before passage of the 1985 Food Security Act (FSA). U.S. agricultural policy was reshaped by the 1985 FSA after a \$13-billion decline in U.S. agricultural exports between 1981 and 1985. The first broadly positive effects on agricultural export value since the legislation's passage appeared in FY 1988. Policy shifts had previously lowered either market share or prices for U.S. agricultural exports.

At \$32 billion and 136 million tons, U.S. agricultural exports during the first 11 months of FY 1988 rebounded from their FY 1986 lows, climbing in value by \$7.6 billion and growing more than one-third in volume. U.S. agricultural exports hit a 10-year low in October-August of FY 1986 due to timing in the implementation of policies legislated by the 1985 FSA. High U.S. crop prices stemming from earlier farm legislation also contributed to lower FY 1986 exports. In reshaping farm policy, the 1985 FSA thus legislated a drop in U.S. support prices and an increase in export subsidies. However, a lag between the decision and the act of lowering prices created a period when buyers had an incentive to delay purchases until prices fell, thus reducing sales volume and value during FY 1986.

Lower U.S. prices helped both world and U.S. trade to rebound in FY 1987, as U.S. export volume shot up 17 million tons to 118 million tons, a 17-percent gain in volume. However, lower prices reduced the value of some of the fastest growing U.S. agricultural exports. Corn, sorghum, wheat, and soybean shipments rose 24, 23, 9, and 2 percent in FY 1987. Export value for these commodities simultaneously fell 11, 1, 14, and 3 percent.

In the first 11 months of FY 1988, U.S. export volume and market share continued the growth begun in FY 1987. In addition, prices rose as world commodity supplies fell closer toward the amounts demanded. Before the U.S. drought led to double-digit price hikes, higher prices added to export value, helping offset lower soybean volume. Soybean export value rose 19 percent, a \$770-million gain, despite a 150,000-ton drop in volume. Cotton export value also rose more than \$700 million, a 54-percent gain, as higher prices compounded a 7-percent rise in volume. The largest U.S. export commodities, corn and wheat, each grew more than \$1 billion in value, also benefiting from rising volume and prices.

Corn shipments in FY 1988 exceeded all other commodities, totaling 40 million tons during October-August. This represented a 4-million-ton gain from the 36 million tons of the same period in FY 1987 but remained below the 44 million tons shipped in the same period of 1985. Ironically, U.S. world trade share in FY 1988 was greater than world trade shares in both FY's 1987 and 1985, but FY 1988 volume remained below that of FY 1985 as the volume of world trade fell. Ample crop production enabled the Soviet Union to hold its FY 1988 corn

imports below FY 1985 levels. Also, the European Community (EC) became a net exporter of coarse grains since the passage of the 1985 FSA. The EC also added Spain, an important U.S. customer, to its customs union.

The improvement in the U.S. share of world trade since the passage of the 1985 FSA stems from several factors. China began consuming more of its corn rather than exporting it. Also, Argentina reduced its acreage planted to corn, partly due to lower world prices. Lower prices also helped persuade South Africa to reduce its corn export subsidies and tonnage, and drought cut the export availability of Thai corn in FY 1988.

Compared with those of FY 1987, U.S. corn exports to Japan rose the most, climbing 2.4 million tons to 14 million tons in FY 1988. U.S. corn exports were also higher to the Soviet Union (1.2 million tons higher), Korea (700,000 tons), Taiwan (660,000 tons), Eastern Europe (600,000 tons), Malaysia (300,000 tons), and Saudi Arabia (200,000 tons). U.S. corn sales to Brazil fell 1.2 million tons as Brazil's production rebounded, and U.S. corn shipments to Egypt and China averaged 1 million tons lower.

With the accession of Spain to the EC in FY 1986, the United States largely lost access to that market in FY's 1986 and 1987. In FY 1988, a transition agreement between the United States and the EC resulted in a 1.2-million-ton gain in U.S. corn shipments to Spain. However, U.S. corn shipments to Belgium and the Netherlands, two other traditional U.S. markets, each fell about 400,000 tons. Value for corn grew faster than volume, climbing \$1.1 billion to \$3.8 billion. This represented a 38-percent growth for corn value compared with a 12-percent growth in volume.

Export value growth and volume growth were closer for wheat. U.S. wheat export volume rose 48 percent in FY 1988 from wheat export levels of the year before, hitting 37 million tons. A modest gain in prices meant that value rose 56 percent to \$4 billion. The U.S. share of world markets, on a crop year basis, grew in 1988 compared with both 1987 and 1985, as did the volume of U.S. and world trade. Policy changes resulting from the 1985 FSA had perhaps a more prominent role in boosting wheat exports than corn exports.

Lower world prices stemming from U.S. policy changes helped lead Argentina and Australia to reduce area planted to wheat, and nearly 70 percent of all U.S. wheat shipments was sold through the Export Enhancement Program (EEP). However, weather overseas was also an important factor. The combination of a reduced Soviet crop and a poor-quality crop in the EC, both because of weather, resulted in a 5-million-ton increase in U.S. wheat shipments to the U.S.S.R. between FY's 1987 and 1988. Wheat exports to the U.S.S.R. reached a record 9 million tons, all sold under the EEP. Given world supply and demand conditions, the EEP was not the sole reason for these increased sales. Similarly, U.S. wheat exports to China rose 4.4 million tons and those to India rose nearly 1 million tons, again all under the EEP and following lower crop production in those countries. Expanding consumer demand was the major reason for increased Chinese imports.

One result of an increased proportion of EEP sales in U.S. wheat exports is that lower priced EEP wheat holds down export value. Improving world demand for grains and shrinking world stocks boosted prices for both corn and wheat in U.S. and world markets by comparable amounts in FY 1988. However, the average price of U.S. corn exports increased \$18 per ton, while that for wheat exports rose only \$5 per ton.

Export value of bulk crops (grains, soybeans, soybean meal, and cotton) rose 34 percent in FY 1988 compared with that in FY 1987, a \$4.3-billion gain. At \$17 billion in FY 1988, bulk exports were well above their FY 1986 low, a particularly significant change since falling bulk exports were responsible for nearly all of the \$18-billion decline in U.S. agricultural export value between FY's 1981 and 1986. However, bulk export value remained below the \$17.4 billion recorded in FY 1985.

In contrast, U.S. exports of high-value agricultural products reached a record \$14.8 billion in the first 11 months of FY 1988. Exports of high-value products (HVP) have been on a rising trend since FY 1983, recovering from a much smaller decline than that for bulk exports. Animal product exports reached a record \$5.4 billion during the first 11 months of FY 1988, and horticultural exports reached a record \$3.5 billion. Policy changes under the 1985 FSA had only a slight effect on HVP exports, which have risen with the strong economic growth in foreign industrial countries and a decline in the U.S. dollar in foreign exchange markets. (Stephen MacDonald, Commodity and Trade Analysis Branch)

1/ Preliminary.

OCTOBER-AUGUST IMPORTS UP 2 PERCENT TO \$19.4 BILLION

U.S. agricultural imports in the first 11 months of fiscal year (FY) 1988 (October 1987-August 1988) rose 2 percent to \$19.4 billion, \$300 million above the level of the same period in FY 1987. U.S. agricultural imports were at a record-high pace through May but began to slip during the summer. This decline was reflected in the August import forecast. ^{1/} The import forecast for FY 1988 was lowered from \$21 billion to \$20.5 billion based on the slowdown during the third quarter, particularly in imports of coffee, cocoa products, pork, and horticultural products.

U.S. imports of fruits, vegetables, pork, and cocoa products were seasonally strong in the first half of FY 1988. While fruit imports typically increase during the winter, this winter's increase was larger than average. In contrast, this summer's decline in fruit imports was sharper than usual.

U.S. agricultural imports, quarterly, FY's 1985-88

Quarter	1985	1986	1987	1988
October-December	4.6	4.9	5.4	5.2
January-March	5.5	5.6	5.1	5.7
April-June	5.0	5.4	5.3	5.0
July-September	4.6	5.0	4.8	4.6 (est.)
Total	19.7	20.9	20.6	20.5

The following events of the past few months will likely affect U.S. agricultural imports during FY 1989:

- o The International Coffee Organization (ICO) lowered the global export quota from 53 million bags to 51.5 million bags in July, the fourth such reduction in FY 1988. Export quotas for FY 1988 were originally set at 56.5 million bags in September 1987. Despite these measures, the ICO indicator price fell from \$1.20 per pound in late June to \$1.05 per pound in late August. In September, the ICO set the FY 1989 quota at 58 million bags, and immediately announced a 2-million-bag cut in the quota.
- o The 1988 U.S. sugar import quota was raised 39 percent in July, largely due to the effect of drought on the U.S. sugar beet crop.
- o Drought reduced U.S. supplies of certain fruits and vegetables and has simultaneously increased livestock supplies.
- o Producing and consuming members of the International Cocoa Organization (ICCO) continue their disagreement over price objectives, leaving in doubt the effectiveness of the ICCO

^{1/} U.S. Department of Agriculture, Economic Research Service. Outlook for U.S. Agricultural Exports. August 25, 1988.

stockpiling policy. This was the general outcome of the latest ICCO talks in September. The indicator price for cocoa beans fell 30 percent from \$1,725 per ton in late May to \$1,205 per ton in early October.

- o Concerns about the size and quality of the Brazilian orange crop raised the wholesale price of frozen concentrated orange juice 15 percent from \$1.65 a gallon in late May to \$1.90 in late August. The October-August 1987/88 import price for orange juice was 50 percent higher than that of the same period a year earlier.

Competitive Versus Noncompetitive Imports

U.S. imports of competitive products, such as fruits, vegetables, meats, and grain products, in the first 11 months of FY 1988 remained above these imports during the same period of FY 1987. The only months in which FY 1988 competitive imports were lower than those in FY 1987 were November, June, and July. Noncompetitive imports, such as coffee, cocoa, rubber, and bananas, on the other hand, fell significantly since April. Noncompetitive imports in FY 1988 were 5 percent below those in the same period of FY 1987.

Import Penetration

Whether or not imports displace U.S. agricultural production has become an important issue in the 1980's as imports rose to record highs and exports fell to 10-year lows. While the trade surplus was shrinking, other symptoms of a struggling farm economy, such as farm foreclosures, emerged. Whether trade policies of other countries result in a loss of American jobs is of particular concern. To get a clearer picture of the issues, Congress recently passed legislation requiring USDA to collect and publish statistics on imports' share of domestic supply by commodity.

U.S. Department of Commerce trade statistics are collected separately from USDA (National Agricultural Statistics Service) production statistics. The two types of statistics are consistently combined only for the major export commodities, such as wheat, corn, and soybeans. Also, production statistics are not available in the same detail as are trade statistics. Production statistics on some commodities are not easily obtained. This occurs because there are often only a few firms in the industry, and disclosure of such information is prohibited.

To facilitate the analysis of import penetration, five import categories will be examined, including live animals and their products, fruits, nuts, and vegetables, grains and products, beverages, and sweets. This sample of commodities accounts for approximately 67 percent of U.S. competitive imports, whose weighted average share of supplies for these commodities is 13.5 percent. Based on the limited sample supplied here, the weighted average import share has increased from 11 percent in 1970. Import shares of domestic supply for noncompetitive imports are assumed to equal 100 percent.

Live animals and their products

The commodities listed below accounted for approximately 80 percent of U.S. animal product imports for 1985-87. Although beef, live cattle, and cheese imports are subject to quotas, the U.S. livestock industry is comparatively free of Government support. Producers' access to cheap feed (corn, sorghum, barley, and oats) and the expense of imported animal products make the livestock industry more competitive.

Live animals and their products: Import share of domestic supply, CY's 1969-85

Commodity	1969-71 average	1983-85 average	1985-87 average import value
	---Percent---		Million dollars

Fruits, nuts, and vegetables

Frozen concentrated orange juice imports have received a considerable amount of attention in the last decade as shown in the table below. Several freezes hit the Florida orange crop in the past 5-10 years while orange juice consumption was rising. To maintain their share in the beverages market, orange juice processors set up processing plants on the East Coast to process Brazilian concentrate into consumer-ready orange juice.

Nearly half of the U.S. noncitrus fruit supply (excluding apples) is imported. Grapes, pears, peaches, bananas, and strawberries enter the United States primarily from Latin America. The share of apples imported has doubled over the 15-year period, growing from 2.6 percent to 5.2 percent.

Fruits, nuts, and vegetables: Import share of domestic supply, CY's 1969-85

Commodity	1969-71 average	1983-85 average	1985-87 average import value
	---Percent---		Million dollars
Total fresh fruit	22.4	25.8	541
Orange juice	3.0	35.5	522
Tree nuts	26.7	12.2	377
Fresh, frozen vegetables	3.8	4.2	731

Grains and products

Pasta products (macaroni) are among the specialty commodities that have found a ready market in the United States. A change in the Food Security Act of 1985 lowered the price of oats, consequently reducing oat production and encouraging a significant increase in oat imports.

Grains and products: Import share of domestic supply, CY's 1969-85

Commodity	1969-71 average	1983-85 average	1985-87 average import value

Beverages

The volume of U.S. wine imports increased at an annual rate of 11 percent from 1965 to 1985. Wine imports dropped in 1986 and 1987, as a depreciating dollar produced an increase in wine prices from \$7.44 per gallon in 1985 to \$11.33 per gallon in 1987. The volume of malt beverage imports grew at an annual rate of 13 percent from 1965 to 1987. Malt beverage prices have not risen nearly as rapidly, however, as wine prices have.

Sweets

U.S. sugar consumption climbed throughout the 1960's and early 1970's. Raw sugar imports during that time regularly reached 5 million tons, and its production reached 5-6 million tons. However, this market changed in the mid-1970's when high fructose corn syrup and other alternative sweeteners emerged. As raw sugar demand dropped and foreign producers were increasingly being subsidized, U.S. producers were unable to compete with unlimited imports simply by applying duties and fees. Therefore, since 1982, quotas have limited the amount of raw sugar imported into the United States to less than a third of the levels previously imported. (Stephen R. Milmo, Commodity and Trade Analysis Branch)

U.S. TRADE BENEFITS ECONOMY

U.S. agricultural export value rebounded in 1987 from its lowest level in 10 years. This is an important adjustment. Production from more than a third of our cropland moves into export channels. The United States exported an estimated 76 percent of its wheat, 55 percent of its rice, 41 percent of its soybeans, 24 percent of its corn, and 45 percent of its cotton in fiscal year (FY) 1988 (October 1987–September 1988).

Farm product exports generate employment, income, and purchasing power in the farm and nonfarm sectors. For example, farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export necessitate additional economic activity in the manufacturing, trade, and transportation sectors. An input-output (I/O) model was used to measure this economic activity in terms of income, employment, and output. 1/

U.S. agricultural exports peaked in calendar year (CY) 1981 at \$43.3 billion after years of steady growth, only to decline 33 percent by 1986. Agricultural exports rose in 1987 but did not reach 1985 levels. Bulk and processed agricultural exports at CY 1981 levels provided employment for 1.2 million workers, 1-1/3 times the level supported by the CY 1987 agricultural exports. Exports in CY 1981 generated slightly more than \$100 billion in business activity: \$43.3 billion for exports and \$63 billion for supporting activities. In 1987, exports generated \$75.8 billion in business activity: \$28.6 billion for exports and \$47.2 billion for supporting activities. Net exports in CY 1981 contributed \$27 billion to the U.S. trade balance compared with \$8 billion in CY 1987.

Exports Generate Added Business Activity

The United States exported \$28.6 billion of agricultural products in CY 1987. The value of exported raw products was \$13.1 billion; processed commodities, \$11.1 billion; and transportation and trade services for raw and processed products, \$4.4 billion.

Business activity of an estimated \$75.8 billion was required to produce the exported commodities and supporting goods and services. Thus, each dollar received from agricultural exports stimulated another \$1.65 of output in the U.S. economy, a multiplier effect of more than 2.

Therefore, supporting activity required to produce the agricultural goods and services exported in CY 1987 generated an additional \$47.2 billion of output, including \$7.2 billion from the farm sector, \$3.7 billion from the food processing sector, \$15.2 billion from other manufacturing sectors, \$5.8 billion from trade and transportation, and \$15.3 billion from other services. Nonfarm sectors of the economy received about 85 percent of the additional economic activity.

1/ For a detailed explanation of the input-output model, see Gerald Schluter, Chinkook Lee, and William Edmondson, "Income and Employment Generation in the Food and Fiber System," Agribusiness, Vol. 2, No. 2 (1986), pp. 143-58.

Jobs For 903,000 Workers

U.S. agricultural exports in 1987 supported an estimated 903,000 full-time civilian jobs. Of this total, more than 381,000 U.S. farmworkers, 12 percent of the farm labor force, worked in the production of export commodities.

In addition, 522,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 59,000 of these were in food processing, 191,000 were in trade and transportation, 101,000 were in other manufacturing sectors, and 171,000 were in other services.

Bulk Exports Dominate

Bulk agricultural exports (grains, oilseeds, and cotton) accounted for \$13.3 billion, or 47 percent, of the \$28.6 billion in agricultural exports in CY 1987. Bulk exports, however, have a smaller proportional effect on the nonfarm economy. The \$13.3 billion of direct bulk exports generated an additional \$20.5 billion of business activity (\$1.54 additional output per dollar of bulk exports compared with the \$1.65 for all agricultural exports). This additional activity was distributed differently across economic sectors (4 percent to farming, 39 percent to manufacturing, 45 percent to other services, and 12 percent to wholesale trade and transportation) than the business activity for all agricultural exports (15 percent to farming, 40 percent to manufacturing, 32 percent to other services, and 13 percent to wholesale trade and transportation). Of the 903,000 jobs related to U.S. agricultural exports, 447,000 (49 percent) supported bulk exports.

Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. trade balance increased substantially during the 1970's. Net U.S. agricultural exports (exports minus imports) rose from about \$1 billion in 1969 to nearly \$27 billion in 1981. Net agricultural exports partially offset a \$157-billion deficit in nonfarm trade in CY 1987, leaving the U.S. trade balance in deficit by \$149 billion.

The Effect of Agricultural Imports on U.S. Output

The United States imported \$20.4 billion in agricultural commodities in CY 1987. Some \$6.6 billion of this total was spent on complementary items (such as bananas, coffee, and tea) that did not compete directly with U.S. agriculture. The balance of \$13.8 billion was spent on competitive imports (such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines) that competed with U.S. products.

Since CY 1970, both complementary imports and competitive imports have been growing at an annual rate of about 8.2 percent. Only competitive imports were included in the input-output analysis of the effects of imports on the economy.

Within the food processing sector, the subsectors for meat products, beverages and flavorings, sugar refining, and food freezing, canning, and drying accounted for nearly 75 percent of its import value in CY 1987. Although the

producer's value (at processing plant) of \$2.9 billion in exported meat products offset the \$2.6 billion producer's value of imported meat products, the United States imported more than \$400 million of sugar and exported \$200 million, and imported \$1.6 billion of frozen, canned, and dried goods and exported \$900 million.

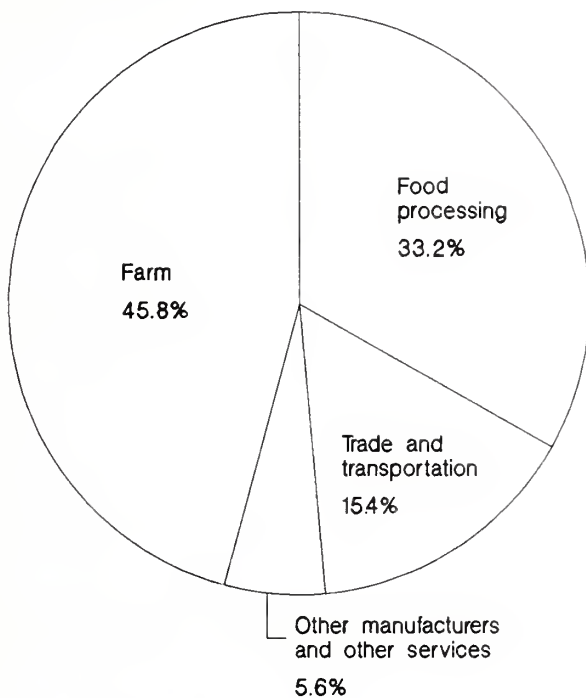

Using the I/O model, the equivalent domestic output effect of the \$13.8 billion of competitive imports in CY 1987 is estimated at around \$36 billion. That is, each dollar spent on imports would have required roughly another \$1.61 in supporting goods and services if those imported items had been produced domestically, an output multiplier of about 2.61.

Agricultural Trade Benefits U.S. Economy

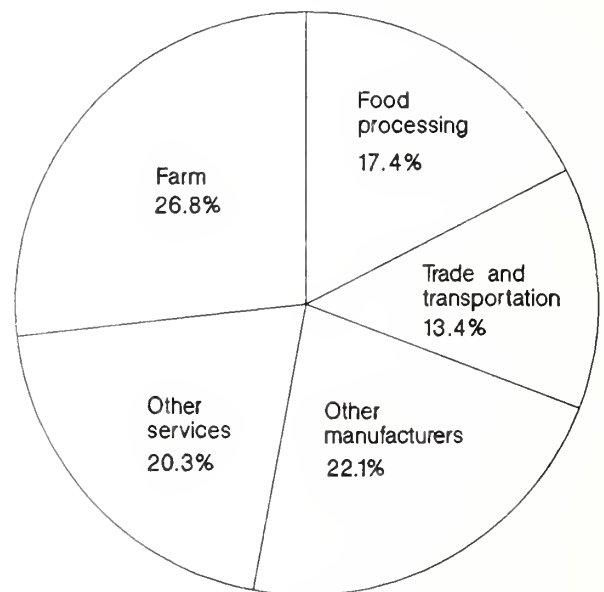

The direct balance of U.S. agricultural trade in CY 1987 was more than \$8 billion, a result of \$28.6 billion in exports minus \$13.8 billion in competitive imports and \$6.6 of complementary agricultural imports. However, the additional business activity needed to produce the supporting goods and services for exports and the output lost by importing competitive farm products reveals a different picture. The economywide CY 1987 net business surplus for agricultural trade was an estimated \$33.2 billion, a result of \$75.8 billion of total output generated by farm exports minus \$42.6 billion of agricultural imports (including complementary imports).

Figure 1

While direct effects of agricultural exports favor the farm sector...

...the total business activity is widely shared

Calendar year 1987 data.

U.S. agricultural trade positively affects most sectors of the economy. The farm sector's \$20.3 billion of output associated with agricultural exports more than offset the \$8.2 billion of farm output implicitly lost because of competitive agricultural imports. The food processing sector gained \$2.2 billion in total output and about 3,600 jobs but lost \$130 million in income.

U.S. agricultural trade benefited the processing of meat, grain, fats and oils, and miscellaneous foods. Agricultural trade did not benefit sugar mills, dairy plants, canners, freezers, and dehydrators, beverage and flavoring makers, and confectioners and bakers.

The U.S. economy outside of farming and food processing directly accrued a net \$3.5 billion from agricultural trade and a net increase in output of \$25.5 billion after considering the domestic output foregone from competitive agricultural imports.

Farm Sector Receives Much of Income Benefit

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although \$1 of agricultural exports in CY 1987 generated \$2.65 in total (direct and supporting) economic activity, \$1 represented income to wage earners, profits, and taxes.^{2/} Thus, the \$28.6 billion of agricultural exports in CY 1987 generated \$75.8 billion of total economic activity but only \$28.6 billion of income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

The share of total income attributed to agricultural exports and competitive imports to the nonfarm and nonfood processing sectors of the economy in CY 1987 was each nearly 67 percent. The distribution of the remainder within the farm and food processing sectors differed markedly. The farm sector received 26 percent of the total income from agricultural exports, while the food processing sector received 8 percent, reflecting the importance of raw agricultural commodities in the export bill of goods.

The total income effect of competitive imports (a lower level than exports) was more evenly divided between the farm and food processing sectors, with each assuming about 20 percent, reflecting the greater importance of processed food products in the competitive import bill of goods. (William Edmondson and Gerald Schluter, National Economy and History Branch, Agriculture and Rural Economy Division)

^{2/} This income is directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers can purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. Hence, more purchasing power is spread throughout the total economy. In addition, the heightened activity, trade, and transportation stimulated by agricultural exports can boost investment in plants and equipment. Because input-output analysis does not consider this additional income, our estimates of the economywide influences of agricultural trade are conservative.
